High School Physics

Overview and Scope and Sequence SY14-15

Course Overview: Physics I is the study of the way the universe works. Students will discover how Newtonian and classical physics can describe and explain the physical world. Students will also examine how modern technologies that have emerged stem from those laws, the electromagnetic spectrum, and knowledge of the atom. The topics covered will include motion, forces, gravity, energy, momentum, waves, sound, light, optics, electricity, and magnetism. Students will bridge old understandings with the new, learning how modern physics has changed our understanding of the physical world, and has afforded us with modern conveniences.

School Year At a Glance

Advisory	Units	Timeline
Advisory 1	Unit 1: Forces in One Dimension Unit 2: Forces in Two Dimensions	9 weeks
Advisory 2	Unit 3: Energy & Motion (Part 1) Unit 4: Energy & Motion (Part 2)	9 weeks
Advisory 3	Unit 5: Electromagnetic Radiation and Sound Unit 6: Electromagnetic Radiation and Light	9 weeks
Advisory 4	Unit 7: Charge and Electricity Unit 8: Magnetism	9 weeks

Unit 1: Forces in One Dimension

Student Performance Expectations

Students who demonstrate understanding can:

HS-PS2-2. Use mathematical representations to support the claim that the total momentum of a system of objects is conserved when there is no net force on the system. [Clarification Statement: Emphasis is on the quantitative conservation of momentum in interactions and the qualitative meaning of this principle.] [Assessment Boundary: Assessment is limited to systems of two macroscopic bodies moving in one dimension.]

HS-PS2-3. Apply scientific and engineering ideas to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision.* [Clarification Statement: Examples of evaluation and refinement could include determining the success of the device at protecting an object from damage and modifying the design to improve it. Examples of a device could include a football helmet or a parachute.] [Assessment Boundary: Assessment is limited to qualitative evaluation and/or algebraic manipulations.]

Integrated Common Core State Standards

For ELA/Literacy

WHST.9-12.7 Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation. (HS-PS2-3)

For Mathematics

- MP.2** Reason abstractly and quantitatively. (HS-PS2-2)
- MP.4** Model with mathematics. (HS-PS2-2)
- HSN-Q.A.1** Use units as way to understand problems and to guide the solution of multistep problems; choose and interpret units consistently in formulas; chose and interpret the scale and the origin of graphs and data analysis. (HS-PS2-2)
- HSN-Q.A.2** Define appropriate quantities for the purpose of descriptive modeling. (HS-PS2-2)
- HSN-Q.A.3** Choose level of accuracy appropriate to limitations on measurement when reporting quantities. (HS-PS2-2)
- HSA-CED.A.1** Create equations and inequalities in one variable and use them to solve problems. (HS-PS2-2)
- HSA-CED.A.2** Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales. (HS-PS2-2)
- HSA-CED.A.4** Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. (HS-PS2-2)

Unit 3: Energy and Motion (Part 1)

Unit 3: Energy and Motion (Part 1)		
Disciplinary Core Ideas	What to Teach	Crosscutting Concepts
<p>PS3.A: Definitions of Energy</p> <ul style="list-style-type: none"> Energy is a quantitative property of a system that depends on the motion and interactions of matter and radiation within that system. That there is a single quantity called energy is due to the fact that a system's total energy is conserved, even as, within the system, energy is continually transferred from one object to another and between its various possible forms. (HS-PS3-1), (HS-PS3-2) At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy. (HS-PS3-2) (HS-PS3-3) These relationships are better understood at the microscopic scale, at which all of the different manifestations of energy can be modeled as either motions of particles or energy stored in fields (which mediate interactions between particles). This last concept includes radiation, a phenomenon in which energy stored in fields moves across space. (HS-PS3-2) <p>PS3.B: Conservation of Energy and Energy</p>	<p style="text-align: center;">Systems and System Models</p> <ul style="list-style-type: none"> Models can be used to predict the behavior of a system, but these predictions have limited precision and reliability due to the assumptions and approximations inherent in models. (HS-PS3-1) <p style="text-align: center;">Energy and Matter</p> <ul style="list-style-type: none"> Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system. (HS-PS3-3) Energy cannot be created or destroyed—only moves between one place and another place, between objects and/or fields, or between systems. (HS-PS3-2) <p style="text-align: center;">-----</p> <p style="text-align: center;">Connections to Engineering, Technology, and Applications of Science</p> <p style="text-align: center;">Influence of Science, Engineering, and Technology on Society and the Natural World</p> <ul style="list-style-type: none"> Modern civilization depends on major technological systems. Engineers continuously modify these technological systems by applying scientific knowledge and 	<p style="text-align: center;">Science & Engineering Practices</p> <p style="text-align: center;">Developing and Using Models</p> <ul style="list-style-type: none"> Develop and use a model based on evidence to illustrate the relationships between systems or between components of a system. (HS-PS3-2) <p style="text-align: center;">Using Mathematics and Computational Thinking</p> <ul style="list-style-type: none"> Create a computational model or simulation of a phenomenon, designed device, process, or system. (HS-PS3-1) <p style="text-align: center;">Constructing Explanations and Designing Solutions</p> <ul style="list-style-type: none"> Design, evaluate, and/or refine a solution to a complex real-world problem, based on scientific knowledge, student-generated sources of evidence, prioritized criteria, and tradeoff considerations. (HS-PS3-3)

Unit 3: Energy and Motion (Part 1)

<p>Transfer</p> <ul style="list-style-type: none"> • Conservation of energy means that the total change of energy in any system is always equal to the total energy transferred into or out of the system. (HS-PS3-1) • Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems. (HS-PS3-1) • Mathematical expressions, which quantify how the stored energy in a system depends on its configuration (e.g. relative positions of charged particles, compression of a spring) and how kinetic energy depends on mass and speed, allow the concept of conservation of energy to be used to predict and describe system behavior. (HS-PS3-1) • The availability of energy limits what can occur in any system. (HS-PS3-1) <p>PS3.D: Energy in Chemical Processes</p> <ul style="list-style-type: none"> • Although energy cannot be destroyed, it can be converted to less useful forms—for example, to thermal energy in the surrounding environment. (HS-PS3-3) <p>ETS1.A: Defining and Delimiting Engineering Problems</p> <ul style="list-style-type: none"> • Criteria and constraints also include satisfying any requirements set by 	<p>engineering design practices to increase benefits while decreasing costs and risks. (HS-PS3-3)</p> <hr/> <p>Connections to Nature of Science</p> <p>Scientific Knowledge Assumes an Order and Consistency in Natural Systems</p> <ul style="list-style-type: none"> • Science assumes the universe is a vast single system in which basic laws are consistent. thermal energy in the surrounding environment. (HS-PS3-4)

**What to Assess:
Student Performance Expectations**

Students who demonstrate understanding can:

- HS-PS3-1.** Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known. [Clarification Statement: Emphasis is on explaining the meaning of mathematical expressions used in the model.] [Assessment Boundary: Assessment is limited to basic algebraic expressions or computations; to systems of two or three components, and to thermal energy, kinetic energy, and/or the energies in gravitational, magnetic, or electric fields.]
- HS-PS3-2.** Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as either motions of particles or energy stored in fields. [Clarification Statement: Examples of phenomena at the macroscopic scale could include the conversion of kinetic energy to thermal energy, the energy stored due to position of an object above the earth, and the energy stored between two electrically-charged plates. Examples of models could include diagrams, drawings, descriptions, and computer simulations.]
- HS-PS3-4.** Plan and conduct an investigation to provide evidence that the transfer of thermal energy when two components of different temperature are combined within a closed system results in a more uniform energy distribution among the components in the system (second law of thermodynamics). [Clarification Statement: Emphasis is on analyzing data from student investigations and using mathematical thinking to describe the energy changes both quantitatively and conceptually. Examples of investigations could include mixing liquids at different initial temperatures or adding objects of difference temperatures to water. [Assessment Boundary: Assessment is limited to investigations based on materials and tools provided to students.]

Unit 5: Electromagnetic Radiation and Sound

transmitting, and capturing signals and for storing and interpreting the information contained in them. (HS-PS4-5)

What to Assess:

Student Performance Expectations

Students who demonstrate understanding can:

HS-PS4-1. Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media. [Clarification Statement: Examples of data could include electromagnetic radiation travelling in a vacuum and glass, sound waves travelling through air and water, and seismic waves travelling through the Earth.] [Assessment Boundary: Assessment is limited to algebraic relationships and describing those relationships qualitatively.]

HS-PS4-2. Evaluate questions about the advantages of using a digital transmission and storage of information. [Clarification Statement: Examples of advantages could include that digital information is stable because it can be stored reliably in computer memory, transferred easily, and copied and shared rapidly. Disadvantages could include issues of easy deletion, security, and theft.]

HS-PS4-3. Evaluate the claims, evidence, and reasoning behind the idea that electromagnetic radiation can be described either by a wave model or a particle model, and that for some situations one model is more useful than the other. [Clarification Statement: Emphasis is on how the experimental evidence supports the claim and how a theory is generally modified in light of new evidence. Examples of a phenomenon could include resonance, interference, diffractions, and photoelectric effect.] [Assessment Boundary: Assessment does not include using quantum theory.]

HS-PS4-4. Evaluate the validity and reliability of claims in published materials of the effects that different frequencies of electromagnetic radiation have when absorbed by matter. [Clarification Statement: Emphasis is on the idea that photons associated with difference frequencies of light have different energies, and the damage to living tissue from electromagnetic radiation depends on the energy of the radiation. Examples of published materials could include trade books, magazines, web resources, videos, and other passages that may reflect bias.] [Assessment Boundary: Assessment is limited to qualitative descriptions.]

HS-PS4-5. Communicate technical information about how some technological devices use the principles of wave behavior and wave interactions with matter to transmit and capture information and energy. * [Clarification Statement: Examples could include solar cells capturing light and converting it to electricity; medical imaging; and communications technology.] [Assessment Boundary: Assessments are limited to qualitative information. Assessments do not include band theory.]
